Klingseisen, Postfach 10 15 61  
80089 München (DE)

(54) Method and apparatus for reducing NOx emissions in a gas burner

(57) A vertical furnace comprising a low NOx gaseous fuel burner comprising:

a primary fuel gas and primary air inlet (24),  
a burner array (25) located in a wall (28) of said vertical furnace and connected to said primary air and fuel gas inlet (24) for projecting said primary air and fuel outwardly into said furnace, said primary air and fuel being combusted and producing spent gases, a plurality of secondary air vents (27) defined in a wall (28) of said furnace for supplying secondary air to said furnace,

wherein said secondary air vents (27) are positioned relative to said burner array to effect mixing of said secondary air with said spent gases inside said furnace to produce diluted air and to recirculate said diluted air inside said furnace for combustion with said primary air and fuel to reduce NOx emissions.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 10 5492

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
